Reused quantitative results · one 144-frame sequence, not a population study

Setting	Limb assoc. (13 events)	Transfer chain (6 pairs)	Centre-gated τ = 0.05 m	Kick-foot vel. RMSE (m/s)	Root jerk (m/s³)
Accepted Full	13/13	6/6 role	6/6	0.48	784
Fixed-ball Event IK OFF	13/13	6/6 role	6/6	0.66	437
Fixed-ball Event IK ON	13/13	6/6 role	6/6	0.20	797
Indep. object-aware (w=30	13/13	6/6 role	6/6	0.21	835

Event IK ON vs OFF does not change actor/limb/chain assignment on a fixed ball. It improves kick-foot velocity tracking and increases jerk. The independent object-aware solver has no cross-robot communication; Soccer Full is two per-robot IK solves plus post-IK ball synthesis. Numbers from paper_eval/event_coordination_extension and object_aware_comparison.
